

# Advanced User Definition

As determined by  
ASRT Education and Research Foundation  
Health Care Industry Advisory Council on  
Definition of the Advanced User in Applications Training

November 2012

## **Definition:**

An Advanced User is an individual who works in the facility and has in-depth knowledge of all clinical applications, workflow and associated principles for the modality. The advanced user serves as an in-house training resource for peers, vendors and applications personnel.

## **Characteristics:**

- Good written and verbal communication skills
- Ability and desire to learn
- Respected by interdisciplinary staff members
- Ability and desire to share knowledge with interdisciplinary staff members
- Ability to influence peers and supervisors within the department through formal and informal methods

## **Expectations for the Advanced User:**

- Commit time to learn and share knowledge
- Use technology in a manner for which it was designed
- Be a champion for appropriate use of and training on equipment
- Be an advocate and resource for the continuation of the process
- Effectively train the remaining staff members on operating the system proficiently.
